Builder and analyst who ships real products solo and drives adoption of the tools he builds, with hands-on AI development experience across agentic systems, computer vision, and live production infrastructure.

Education

New York University | MS, Management of Technology

May 2026

Coursework: Product Strategy, Data Analytics, Economics and Strategy

Ramaiah Institute of Technology | BE, Computer Science & Engineering

Jul 2023

Experience

Accenture | Product and Strategy Associate

Jul 2023 – Jul 2024

Data Validation and Process Automation – Financial Services

- Cleaned, validated, and standardized broker-supplied Statement of Values data across multiple inconsistent formats for a \$450M+ commercial insurance portfolio spanning 1,000+ property records
- Engineered a cross-field validation framework that surfaced a \$40M valuation anomaly through systematic pattern detection, translating findings into a decision-ready executive brief that drove immediate client remediation
- Drove AI-assisted validation adoption from 40% to 95% in eight weeks by diagnosing friction points, building a catch-log system to automate exception detection and resolution, and iterating on real-time field feedback
- Partnered cross-functionally with compliance, actuarial, and data engineering teams to define requirements and manage Jira-tracked sprint delivery, reducing correction cycles by 20 percentage points
- Served as primary client liaison across brokers, underwriters, and actuaries, translating complex technical findings into clear narratives for non-technical stakeholders and coaching teams through adoption of new workflows
- Used AI tools including Claude Code daily to accelerate analysis and reporting
- Wrote structured requirements and acceptance criteria and produced executive-facing milestone reports

Amoga | Product Analyst

Dec 2022 – Jun 2023

B2B SaaS

- Owned the internal CRM tool end to end at a B2B SaaS startup, defining functional requirements and working with engineering to ship workflow improvements that reduced admin overhead across the sales organization
- Launched automated outbound campaigns in Mailchimp and HubSpot and built performance dashboards in Looker and Apache Superset tracking funnel KPIs, driving 7% web traffic growth and a 10% lead conversion improvement
- Translated complex product capabilities into buyer-facing copy, one-pagers, and sales kits, and synthesized competitive intelligence into strategic briefs that informed roadmap prioritization for the founding team
- Analyzed CRM and marketing data in Looker and Google Analytics, surfacing insights that informed campaign optimization, pipeline prioritization, and go-to-market decisions
- Standardized incoming lead and campaign data arriving from multiple sources into a consistent structure

Built

VibeCheck (Live App | GitHub) | Agentic AI App

2025

- Identified an LLM hallucination failure mode in production, diagnosed the root cause, and shipped a YouTube Music API validation layer executing 40+ async parallel calls to cut the error rate to near zero
- Integrated MCP tool calls, JSON-enforced structured outputs, and session-state memory for multi-turn agentic workflows

Raivana (raivana.in | GitHub) | Founder, Full-Stack E-Commerce Platform

Ongoing

- Built and operates a live e-commerce platform serving customers across 45+ countries and 8 currencies with 156 products and real transaction volume, as sole founder and operator
- Architected a serverless backend with an HMAC-verified webhook handler and a 30-day TTL idempotency key store guaranteeing exactly-once payment processing, built proactively rather than after an incident

Foreman (GitHub) | Two-Stage Agentic Vision System

2026

- Designed a two-stage architecture where a recall-tuned perception model proposes hazard candidates and an independent reasoning verifier re-opens the same evidence to confirm or reject them against a defined bar
- Roughly doubled precision from 0.15 to 0.34 across a seven-arm ablation study, deliberately trading recall for reviewable alert quality

Walmart Stockout Prediction (GitHub) | Stockout Prediction and Optimization

- Trained an XGBoost classifier reaching 76.6% recall and 0.77 AUC across 47 engineered features, validated through 5-fold cross-validation and three separate leakage audits
- Formulated a Gurobi linear program that allocated 1,685 restocking units within a \$32,836 budget

Skills

Product & Strategy: Product Management, Roadmapping, Requirements Definition, Backlog Management, Competitive Analysis, Go-to-Market Strategy, Stakeholder Communication

Analytics & Data: Python, SQL, Apache Superset, Looker, Google Analytics, XGBoost, Gurobi, KPI Reporting, Funnel Analysis

AI & Technical: LLM Integration, Agentic Workflows, MCP Tool Use, Structured Outputs, REST APIs, Webhooks (HMAC), Claude Code, Groq API, Git, Streamlit

Tools: Jira, HubSpot, Salesforce, Mailchimp, Excel, PowerPoint
